

Kushla Water System
Engineer's Report
William G. Luker/Speaks & Associates

1/25/2021

Engineering Work:

The following work items are ongoing:

1. **Risk and Resilience Assessment and Emergency Response Plan** – The Board approved Speaks to perform this work some time ago. The first part of the plan, The Risk and Resilience Assessment must be completed in about 5 months. We are working with the EPA developed program to complete the Assessment and allow the Board to certify that it has been completed. We then have an additional 6 months to complete the Emergency Response Plan. We are gathering information and regulatory requirements to begin work on the report
2. **System Construction Specifications:** We are awaiting comments on the draft of the specifications.
3. **Water and Sewer Service to proposed Business Park on Hwy 158:** No further information has been made available on this project at present.
4. **Road Paving Projects:**
 - Fort Kali Oka – Construction on the road is nearly complete. We are awaiting as-built drawing information on the waterline work from the Contractor and a final walk-thru with the Water Superintendent.
5. **Investigating System Water Supply Needs for Planning Purposes** – This work is underway. Working with the Superintendent we will look at the need for modifying the wells and pump stations to better serve system needs and analyze whether or not another well should be considered as part of a long range plan. This information is needed and would be included in the upcoming preparation of the Risk and Resilience Assessment and the Emergency Response Plan.
