

Kushla Water System
Engineer's Report
William G. Luker/Speaks & Associates

7/30/2018

Mobile County Pay-As-You-Go Projects:

MCR 2010-109 Evans Road: We have submitted closeout information to the County and are awaiting final approval and payment to Kushla for the engineering design work; balance owed is approximately \$4,500. I checked on this project closeout and the payment to Kushla and the closeout is somehow tied up (not waterline issues). I am going to do some additional follow-up on this.

Engineering Work:

The following work items are ongoing:

1. **Kali Oka Pump Station:** We are evaluating a request by the Operator to assess the feasibility of relocating the pump station on Kali Oka Road, which is not being used, to a point near the interconnection with South Alabama Utilities. It is my understanding that current thoughts are to re-furbish the station as necessary and activate inter-connect with Saraland Water.
2. **Mapping work and preparation of an Updated Water System Overview and Valve Reference Map:** We have begun work on the system mapping and will be acquiring the base map information from Mobile County Tax Assessor's office in the next few days. There is a letter and digital data use agreement that requires the Chairman's signature at the meeting today, if possible.
3. **Spice Pond Road Metering Station:** We are meeting with SAU to discuss the needed line improvements on the SAU system side of the pump station.
